

DSI Tempest Random Sound Generator

run DSI Tempest Random Sound Generator.app. (it's not signed -> google on how to open unsigned apps in OSX).

1. set tempest in sound mode
2. choose the Tempest MidiOut Port. (or you can pipe it somewhere else f.e. puredata).
3. select from the checkbox menu wich parameter you want to randomize.
4. choose the randomization strength with the slider.
5. press Randomize to generate a sysex stream and send it to your Tempest.
6. if you like the generated sound, save it in your Tempest. if not Randomize again ;)

Tipp: you can easily generate some kind of percussive sounds when you deselect the Env_Vca option.

have fun and cheers!
